DETAILED ACTION

Allowable Subject Matter

Claims 1-16 are allowed.

The following is an examiner's statement of reasons for allowance: Claim 1 includes the limitations that an infrared sensing calibration method comprises comparing an infrared detector output value to standard output values, determining an infrared emitter input value, and storing said infrared emitter input value as a calibration standard. Claim 10 includes the limitations that an infrared sensing calibration method comprises measuring whether detected radiation is within a standard range of output values and determining an infrared emitter input value to maintain said output within said standard range. Claim 12 includes the limitations that an infrared sensing calibration system comprises measuring whether detected radiation is within a standard range of output values and determining an infrared emitter input value to maintain said output within said standard range.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Black, U. S. Patent No. 5,510,269 describes a method for calibrating an infrared sensing device (fig. 4) comprising detecting transmitted infrared

radiation, storing a range of output values in a control module (col. 9, lines 18-28), and determining an infrared emitter output level using a microprocessor (fig. 13, col. 9, lines 29-61).
